

## Performance Commentary

The long-term yields in the large economies increased somewhat in August, driven by higher inflation expectations. This was partially due to the Federal Reserve Chairman Powell stating that the Fed will allow inflation to temporarily increase above the target. The US 10-year yield increased by 20 bps while the German 10-year yield rose by 12 bps. The JPY and USD both depreciated by 1% versus the EUR. As a result, the fund outperformed the index in August. Our investments in Norway contributed most to performance due to the positive development in the Norwegian krone, which appreciated by 2.4% versus the EUR. The oil price continues to recover and there are signs that the Norwegian economy is performing better than peers. The fund's detractors were our investments in Peru, the US and our local currency Chilean bond (matured). Our investment in Peru fell due to the depreciating currency and higher long-term rates, while the latter two were affected by the depreciation of the USD and CLP respectively. Our local currency Chilean bond matured, and we replaced it with a Chilean bond denominated in EUR.

SKAGEN Tellus invests primarily in bonds and certificates issued or guaranteed by governments from around the world.

The fund is suitable for those with at least a three year investment horizon. Investors must be able to tolerate currency fluctuations.

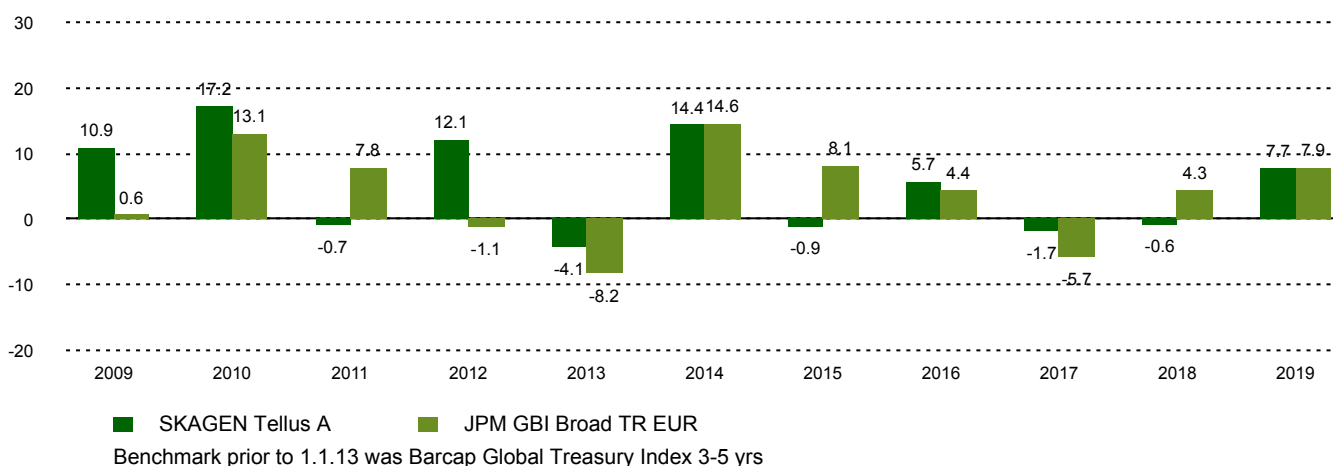

## Historical performance (net of fees)
