

SKAGEN Tellus Status Report February 2017

The art of common sense

Key numbers as of 28 February 2017

	February	QTD	2016	1 years	3 years	5 years	Since inception*
SKAGEN Tellus	1,6%	0,7%	5,7%	5,5%	5,9%	4,7%	5,4%
JPM Broad GBI Unhedged *	2,2%	0,7%	4,4%	1,1%	8,3%	3,9%	5,0%
Excess return	-0,6%	-0,1%	1,3%	4,4%	-2,5%	0,8%	0,4%

*Inception date: 29/09/2006

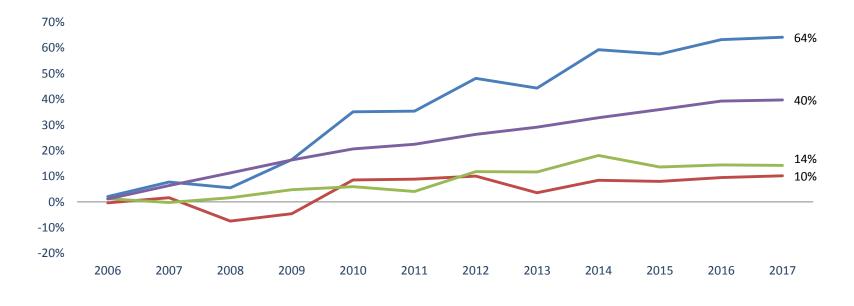

**Benchmark index before 01/01/2013 was Barclay's Capital Global Treasury Index 3-5 years

Unless otherwise stated, all performance data in this report relates to class A units, measured in EUR and is net of fees.

The return of the Mexican peso

- The global economy is starting the year on a strong footing. Both soft and hard numbers have been higher than expected. This supports our view of stable or somewhat higher long-term interest rates in the US and central Europe.
- The duration of SKAGEN Tellus is currently 3.3 years, which is substantially lower than the index's duration of 7.7 years. Given the current state of the business cycle, we only take interest rate risk in countries where there is still a solid case for a fall in the interest rate going forward and/or the yield is attractive. We have longer duration in countries were we expect the credit premium to fall, such as Portugal and Croatia, or where there is a high interest rate, e.g. Peru and Chile. We have very low duration on our investments in the US, UK, Canada, Mexico and Norway. These holdings are based on an expectation of an appreciation of the currency.
- Currency appreciation contributed most to the fund performance in February. The Mexican peso appreciated by 5.5 percent, implying that our short dated Mexican bond was the largest contributor the fund. The appreciation is partly due to measures introduced by the central bank to stabilise the peso. The peso is now at its strongest level since before the US presidential election. A stronger USD and appreciating emerging market currencies also contributed positively to the return in February.
- The interest rates in peripheral Europe decreased after the Eurogroup Finance Ministers agreed there was enough common ground for the creditors to return to Athens. This led to increased hopes of a final agreement and release of the last tranche of the bailout funds to Greece.
- The fund underperformed its index in February. This was mainly due to an underweight in JPY and USD.
